Aluno: João Gabriel Tito de Moraes

The image shows a screenshot of the Visual Studio Code interface, specifically the Debug Console. The console is displaying a JSON object representing a project and its employees. The JSON structure is as follows:

```
{
  "nomeProjeto": "Projeto Dartado",
  "funcionarios": [
    {
      "nome": "José",
      "dependentes": [
        {
          "nome": "Carlos"
        },
        {
          "nome": "Ana"
        }
      ]
    },
    {
      "nome": "Fernanda",
      "dependentes": [
        {
          "nome": "João"
        }
      ]
    },
    {
      "nome": "Lucas",
      "dependentes": [
        {
          "nome": "Maria"
        }
      ]
    }
  ]
}
```

Below the JSON object, the text "Exited." is visible. The console also shows the connection status: "Connecting to VM Service at ws://127.0.0.1:60316/vbkd8mks1q-/ws" and "Connected to the VM Service." The top of the window shows the "DEBUG CONSOLE" tab selected, with other tabs like "PROBLEMS", "OUTPUT", "TERMINAL", and "PORTS" visible. A search bar at the top right contains the text "Filter (e.g. text, include, escape)".
